My apprenticeship

- **IT-Specialist for application development**
  → mainly working in the software development department

> we are usualy tasked with **inhouse...**
>
> - Requests
> - fixing
> - customization

- we get **tickets** and **demands**
  → **conceptualized** from IT-Analysts
- Analysts are in contact with the relative department
  - The analysts highlight what program **requirements** are needed
- **User Programs**
  → e.g. Program displays information about a particular material, which can then be changed by the user, saving the newly created materialdata
- **Lists with an underlying logic or Job Programs**
  → e.g. A Block list for Materialorders which automaticaly stops new orders from being created e.g. if no storage is left
- **Form masks using Adobe Lifecycle editor**
  → to automaticaly print labels or dokuments in a given format with customer information automaticaly inserted
